                         ò
        The present sequence represents the nucleotide sequence of the long isoform of HELA2. cDNA generated from HeLa cells and PAI-2 expressing HeLa cells was amplified using PCR primers AAV48312-13. Three new sequences were detected in the 480 bp amplicon. These sequences are designated HELA2 and ATC2 which have high homology to serine proteases and BCOM3 which has homology to a kinase. The proteins are involved in or associated with regulation of cell activity and/or viability.

Administration of recombinant HELA2 (also called testisin) is used to correspond in come non-testicular germ cell cancers (seminoma) and is also expressed in some non-testicular germ cell cancers (seminoma) and is also correspond in some non-testicular germ cell cancers (seminoma) and is also expressed in some non-testicular germ cell cancers (seminoma) and is also condovary), so is a marker/potential therapeutic target for cancer. The promoter from the HELA2 gene is useful for testis-specific expression of char genes, e.g. for gene therapy or modulation of fertility. Drugs that the block activity of HELA2 should have antitumour activity (other than in testis recombinant HELA2 should stop growth of tumours and normalise sperm development (ellminating the need for orchidectomy).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   009

AAX52213-74 encode secreted and transmembrane human proteins, and are obtained from cDNA libraries, prepared from fetal lung, fetal kidney, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PR0211 and PR0217 can be used for disorders associated with the preservation and mintenance of gastrointestinal mucosa and the repair of acute and chronic encosal lesions (e.g. enterocolitis, 2011inger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including PR0265 can be used as for fibromodulin, e.g. for reducing dermal scarring. PR0264 can be used as for fibromodulin, e.g. for reducing dermal carating and treatment of Usher Syndrome or Atrophia areata; PR0269 can be used an anti-thrombotic agent; PR0287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PR0317 can be used for treating problems of the kidney, uterus, endometrium, con be used for treating problems of the kidney, uterus, endometrium, but the place of the place of the kidney in the heart of genital tract 귱 New isolated human genes and polypeptides used in, e.g. treatment gastrointestinal ulceration. Yuan J; Chen J, Goddard A, Pennica D, Claim 2; Fig 91; 320pp; English. Gurney AL, WPI; 1999-229533/19.

The invention relates to a novel nucleic acid encoding a PRO polypeptide. The polypeptides and polynuclectides of the invention may be useful as research tools and as therapeutics for treating enterocolitis, Zollinger-Blison syndrome, gastrointestinal ulceration, psoriasis, cancer, Parkinson's disease, Alzheimer's disease, ALS, neuropathies, dermal scarting and wound healing, nerve repair, thrombosis, bone and/or l cartilage formation, angiogenesis, asthma, rheumatoid arthritis, multiple sclensis, inflammatory disorders, atherosclerosis, cardiac injury, infertility, premature agging, ALDS, diabetes complications and stroke. The molecules may also be utilised during gene therapy procedures and transgenic animal production. The current sequence is that of the human

```

The present sequence is one of sixty one nucleic acids encoding novel secreted and transmembrane PRO polypeptides. The PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g. lung enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, artherosclerosis), inflammatory disorders (e.g. asthma, rheumatoid arthritis, multiple sclerosis), infertility, AIDS and diabetes and retinal disorders such as retinitis pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization probes, and in chromosome and gene mapping

Tumas D; New transmembrane polypeptides and nucleic acids encoding the WPI; 2003-329602/31.

Ä,

# Claim 2; Fig 91; 484pp; English.

The invention relates to an isolated nucleic acid with at least 80% nucleic acid sequence identity to a nucleotide sequence encoding one of a secreted/transmembrane polypeptides, or RNO polypeptides or encoding a C RNO protein extracellular domain. Also included are a vector comprising the PRO nucleic acid, a host cell comprising the vector, producing a PRO CC polypeptide (by culturing the host cell for the expression of the PRO CC polypeptide (No culturing the PRO polypeptide from the cell culture), an isolated PRO polypeptide (having at least 80% sequence identity to: (C an immino acid sequence selected from the 61 PRO proteins; (B) an amino acid sequence encoded by a nucleic acid molecule deposited with an ATCC number (detailed in the specification); or (c) an extracellular domain of peptide), a chimaeric molecule comprising a PRO polypeptide of to a RNO polypeptide or to a PRO polypeptide of containing the polypeptide.

CC PRO1545 or PRO1868 in a sample suspected of containing the polypeptide, modulating at least one biological activity of a cell expressing a PRO245 or PRO1868 and containing at least one biological activity of a cell expressing a PRO245 or PRO1868 and containing at least one biological activity of a cell expressing a PRO245 or PRO1868 and containing the polyment either correct or PRO1868. Nucleic acids which encode PRO can be used to generate either

                                                                                                                                                                                           a
                                                                                                                                                                                                                            ò
transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy, in chromosome identification, as chromosome markers, or in generating probes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides and nucleic acids may also be used in tissue typing. Anti-PRO antibodies are useful in diagnostic assays for PRO, and in affinity purification of PRO from recombinant cell culture or natural sources. The present sequence encodes a PRO protein

## (GETH ) GENENTECH INC.

Ashkenazi A, Botstein D, Desnoyers L, Eaton DL, Ferrara N; Filvaroff E, Fong S, Gao W, Gerber H, Gerritsen ME, Goddard A; Godowski PJ, Grimaldi JC, Gurney AL, Hillan KJ, Kljavin IJ; Mather JP, Pan J, Paoni NF, Roy MA, Stewart TA, Tumas D; Williams PM, Wood WI;

WPI; 2003-370793/35.

P-PSDB; ABO01818.

New genes and secreted and transmembrane polypeptides (e.g. PRO245 or RR0315), useful for treating or diagnosing e.g. Alzheimer's disease, cancers, hemorrhage, rheumatoid arthritis, diabetes, cirrhosis, ischemia or strokes.

Claim 2; Fig 91; 482pp; English

the inventor and institute a new forecast and increase comprising the full length coding sequence of the DNA deposited with the American Type Culture Collection (e.g. ATCC Deposit No. 209289), or a sequence with at least 80% identity to a DNA encoding a PRO polypeptide comprising any of 61 sequences having 164-1119 amino acids fully defined in the specification. The PRO polypeptides or polymucleotides are useful as comparent and defined in the specification. The PRO polypeptides or polymucleotides are useful as comparent and defined in the specification. The PRO polypeptides or polymucleotides are useful as comparent at defined in the second particularly useful for detecting or treating e.g. Parkinson's disease, allowed to a nation nearly ne 240 243 124 ACGGGTCATCACGTCGCGCATCGTGGGTGGAGAGGACGCCGAACTCGGGCGTTGGCCGTG 183 480 423 9 63 64 GGCTGGACTCAGGAAGCCGGAGTCGCAGGAGGCGGCGCCGTTATCAGGACCATGCGGCCG 184 GCAGGGGAGCCTGCGCCTGTGGGATTCCCACGTATGCGGAGTGAGCCTGCTCAGCCACCG GTGGATGGTCCAGTTTGGCCAGCTGACTTCCATGCCATCCTTCTGGAGCCTGCAGCCTA 544 CTGGGGGTACATCAAAGAGGATGAGGCACTGCCATCTCCCCACCCTCCAGGAAGTTCA 1 CGCGGGAGAGGCCATGGGCGCGCGCGCGCTGCTGCTGCTGCTGCTGCTGCTCG GGCTGGACTCAGGAAGCCGGAGTCGCAGGAGGCGGCGCCGTTATCAGGACCATGCGGCCG 241 CTGGGCACTCACGGCGCGCGCTTGCTTTGAAACCTATAGTGACCTTAGTGATCCCTCCGG CTGGGCACTCACGGCGCGCACTGCTTTGAAACCTATAGTGACCTTAGTGATCCCTCCGG GTGGATGGTCCAGTTTGGCCAGCTGACTTCCATGCCATCCTTCTGGAGCCTGCAGGCCTA CTACACCCGTTACTTCGTATCGAATATCTATCTGAGCCCTCGCTACCTGGGGAATTCACC CTACACCCGTTACTTCGTATCCGAATATCTGAGCCCTCGCTACCTGGGGGAATTCACC CTATGACATTGCCTTGGTGAAGCTGTCTGCACCTGTCACCTACACTAAACACATCCAGCC 484 CATCIGICICCAGGCCICCACATITGAGITIGAGAACCGGACAGACIGCIGGGIGACTGG GGTCGCCATCATAAACAACTCTATGTGCAACCACCTCTTCCTCAAGTACAGTTTCCGCAA 121 ACGGGTCATCACGTCGCGCATCGTGGGTGGAGGACGCCGAACTCGGGCGTTGGCCGTG 181 GCAGGGGAGCCTGCGCCTGTGGGATTCCCACGTATGCGGAGTGAGCCTGCTCAGCCACCG 424 CTATGACATTGCCTTGGTGAAGCTGTCTGCACCTGTCACCTACACTAAACACACAGCC CATCTGTCTCCAGGCCTCCACATTTGAGTTTGAGAACCGGACAGACTGCTGGGTGACTGG CTGGGGGTACATCAAAGAGGATGAGGCACTGCCATCTCCCCCACCACCTCCAGGAAGTTCA Gaps Query Match 99.1%; Score 1090.6; DB 8; Length 1100; Best Local Similarity 99.6%; Pred. New PRO polypeptides and nucleic acid molecules, useful in diagnosing or treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, cancer, AIDS, Alzheimer's disease or Parkinson's disease.

Claim 2; Fig 91; 473pp; English.

The invention relates to an isolated PRO polypeptide having at least 80% amino acid sequence identity to: (a) any one of 61 fully defined amino acid sequence given in the specification (appearing as ABIG5437-catid sequences given in the specification (accession numbers of ABIG54407); (b) an amino acid sequence encoded by the nucleotide sequence deposited under Amarican Type Culture Collection (accession numbers of 11sted in the specification); (c) any one of the PRO sequences which can be people sequence sequences which is associated signal peptide; or (e) an one of the PRO polypeptide which lacks its associated signal peptide; or (e) an one of the PRO polypeptide which lacks its associated signal peptides. Vectors, host cells and anti-pRO antibodies. The PRO polypeptides and nucleic acids are useful in diagnosing or treating enterocolitis, gastrointestinal ulceration, skin disease associated with a sequence caids are useful in diagnosing or treating enterocolitis, gastrointestinal ulceration, skin diseases associated with a sequence call carcinoma, Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, inflammatory disease, e.g. theumatorid arthritis, asthma or multiple sclerosis, organ failure, atterosclerosis, cardiac injury, infertility, birth defects, premature adjing, AlbS cancer, diabetic complications, or mutations in general. The polypeptides are also useful for wound repair and associated therapies concerned with re-growth of tissue. The nucleotide sequences may be used as hybridisation probes in chromosome and gene mapping, or in generating the propagentides, in assays to identify other proteins or molecules are also useful in the development and secening of therapeutically useful sequence, for complete and secured in the propagent and secured in man are useful in the development and secreming of therapeutically useful seagents, for chromosome identification, and cell suppose in binding reaction, to generate transgence animals or knockout animals, the reproduced assays for identify PRO polypeptide

c diagnosing or treating abnormal bleeding involved in gynecological diagnosing or treating abnormal bleeding involved in gynecological diagnosing or treating abnormal bleeding involved in gynecological diseases e.g. to avoid or lessen the need for hysterectomy. PR0317 may also be useful as an agent that affects angiogenesis and PR0317 is useful in anti-tumour indications or in treating occonary ischaemic conditions. PR0211 and PR0217 polypeptides are useful for treating disorders associated with the preservation and maintenance of gastrointestinal motors and the repair of acute and chronic mucosal lesions, skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis). CC Alzheimer's disease, amyotrophic lateral sclerosis (ALS), neuropathies and disease related to uncontrolled cell growth, e.g. cancer. PR0219 colypeptide plays a regulatory role in the blood coagulation cascade. PR0246 polypeptides which serves at tumour specific antigens may be exploited as therapeutic targets for anti-tumour drugs. PR026 polypeptides which serves at tumour specific antigens may be exploited as therapeutic targets for anti-tumour drugs. PR026 polypeptides and useful as an antithrombotic agent with reduced risk for haemorrhage as compared with heparin. PR0317 polypeptides and tissue repair. PR0234 polypeptides are useful for treating andometrial bleeding angiogenesis. PR0287 polypeptides and multiple sclerosis. The polypeptide and its nucleic acid are useful for tissue typing and/or assay of sample fluids. Anti-PR0 cantibodies are useful in diagnostic assay for PR0 e.g. detecting its cypression in specific cells, tissues or serum and for affinity

The invention relates to an isolated PRO polypeptide. PRO317 is useful in

#### WPI; 2003-288105/28. P-PSDB; ABU64543.

New secreted and transmembrane PRO polypeptides (e.g. PRO533 or PRO245) and genes encoding them, useful for detecting or treating e.g. hyperplasia, endometriosis, cancers, ischemia, coronary arterial disease or inflammations.

# Claim 2; Fig 91; 477pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. The PRO protein solution polynucleotides are also useful as pharmaccuticals, diagnostics biosensors or bioreactors, for detecting or treating e.g. hyperplasis, endometriosis, cancers (e.g. those involving solid tumours), ischaemia,

844

ö coronary arterial disease, polycystic kidney disease, chronic or acute renal failure, or inflammatory responses (e.g. asthma, rheumatoid arthritis, psoriasis or multiple sclerosis) in mammals. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequences presented in ABX96017-ABX96378 are the genes encoding, the primers amplifying and the probes detecting the PRO polynucleotides of the invention 120 180 240 300 360 420 480 540 543 900 99 720 780 840 123 243 303 363 423 483 603 663 723 783 900 124 ACGGGTCATCACGTCGCGCATCGTGGGTGGAGAGGACGCCCGAACTCGGGCGTTGGCCGTG 183 9 63 CTGGGCACTCACGCGGCGCACTGCTTTGAAACCTATAGTGACCTTAGTGATCCCTCCGG GTGGATGGTCCAGTTTGGCCAGCTGACTTCCATGCCATCCTTCTGGAGCCTGCAGGCCTA CATCTGTCTCCAGGCCTCCACATTGAGTTTGAGAACCGGACAGACTGCTGGGTGAGACTGG GGACATCTTTGGAGACATGGTTTGTGCTGGCAACGCCCAAGGGGGGAAGGATGCCTGCTT CGTGAGCTGGGGAGTGGGCTGTGGCTCGGCCCAATCGGCCCGGTGTCTACACCAATATCAG cecesca Garaga Contra de Contra GGCTGGACTCAGGAAGCCGGAGTCGCAGGAGGCGGCGCCGTTATCAGGACCATGCGGCCG Gecrecacreacaaccecacrecacaccececececerrareacaaccarecece GCAGGGGAGCCTGCGCCTGTGGGATTCCCACGTATGCGGAGTGAGCCTGCTCAGCCACCG CTGGGCACTCACGCGCGCGCACTGCTTTGAAACCTATAGTGACCTTAGTGATCCCTCCGG GTGGATGGTCCAGTTTGGCCAGCTGACTTCCATGCCATCCTTCTGGAGCCTGCAGGCCTA CTACACCCGTTACTTCGTATCGAATATCTGTGAGCCCTCGCTACCTGGGGAATTCACC CTACACCCGTTACTTCGTATCGAATATCTGAGCCCTCGCTACCTGGGGAATTCAC CTATGACATTGCCTTGGTGAAGCTGTCTGCACCTGTCACCTACACTAAACACATCCAGCC CTATGACATTGCCTTGGTGAGCTGTCTGCAGCCTGTCACTAAAACACATCAGCC CATCTGTCTCCAGGCCTCCACATTTGAGTTTGAGAACCGGACAGACTGCTGGTGACTGG CTGGGGGTACATCAAAGAGGATGAGGCACTGCCATCTCCCCCACACCCTCCAGGAAGTTCA CTGGGGGTACATCAAAGAGGATGAGGCACTGCCATCTCCCCACACCTCCAGGAAGTTCA GGTCGCCATCATAAACAACTCTATGTGCAACCACCTCTTCCTCAAGTACAGTTTCCGCAA GGTCGCCATCATAAACAACTCTATGTGCAACCACCTCTTCCTCAAGTACAGTTTCCGCAA GGACATCTTTGGAGACATGGTTTGTGCTGGCAATGCCCAAGGCGGGAAGGATGCCTGCTT CGGTGACTCAGGTGGACCCTTGGCCTGTAACAAGGATGGACTGTGGTATCAGATTGGAGT CGGTGACTCAGGTGGACCCTTGGCCTGTAACAAGAATGGACTGTGGGTATCAGATTGGAGT CGTGAGCTGGGGAGTGGGCTGTGGTCGGCCCAATCGGCCCGGTGTCTACACCAATATCAG Gaps Length 1100; ö Sequence 1100 BP; 225 A; 321 C; 314 G; 240 T; 0 U; 0 Other; 4; Indels DB 8; Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ठ
                                                                                        The invention relates to sixty one nucleic acids encoding PRO
polypeptides (secreted and transmembrane). The polymucleotide is useful
in molecular biology, including uses as hybridisation probes, in
chromosome and gene mapping, in generating antisense RNA and DNA, and in
chromosome and gene mapping, in generating antisense RNA and in
considerably. The polymucleotide may also be used in preparing PRO
colypeptides by recombinant techniques, and in generating either
transgenic animals or knock-out animals which, in turn, are useful in the
development and screening of therapeutically useful reagents. The PRO
polypeptide or the antibody is used in preparing a medicament for
treating a condition reappositive to the polypeptide or antibody, such as
mucosal lesions e.g. ung cancer and colon cancer, nerve cell disease
comesal, sancer e.g. lung cancer and colon cancer, nerve cell disease
comesal, antipogenesis, inflammatory disease e.g asthma and
rhounatoid architis, ischaemia, and in various diagnostic assays. The
present sequence represents an CDNA which encodes a PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

```

The invention relates to an isolated, secreted and transmembrane polypeptide, termed PRO polypeptide. The polypeptide is useful for identifying agonists or antegonists of the polypeptide, for preparing variants of the polypeptide, as molecular weight markers for protein clertrophoresis purpose and the nucleic acid is useful for recombinantly expressing those markers. The polypeptide is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. The nucleic acid is useful as therapeutic acid is useful as therapeutic or hybridisation probes, in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, to construct hybridisation pobes for mapping the gene which encodes the PRO and for the genetic analysis of individuals with genetic disorders, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes for polymerase chain reaction (PCR), Northern analysis, Southern analysis and Western analysis. PRO antibody is useful for the passays for PRO, e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The polypeptide or its antibody e.g. tumour. The polypeptide and the nucleic acid is useful for treating obseit, or hypo- or hyper-insulinaemia and cardiac insulficiency disorders, for inducing regeneration of additory hair cells and for reacting bearing loss in mammals and for treating bone and/or cartilage disorders such as sports injuries and arthritis. The presents sequence crepresents conding a human secreted and transmembrane PRO polypeptide. 61 GGCTGGACTCAGGAAGCCGGAGTCGCAGGAGCCGCCGCTTATCAGGACCATGCGGCCG 120 121 ACCCCTCATCACCTCCCCCATCCTCGTCGACACGCCCCAACTCCGGCCGTTGGCCCGTG 180 Novel secreted and transmembrane polypeptide for modulating biological activity of cell expressing the polypeptide, identifying agonists or antagonists of polypeptide, and as molecular weight markers. 64 GGCTGGACTCAGGAAGCCGGAGTCGCAGGAGGCGGCGCCGTTATCAGGACCATGCGGCG 124 Acedentarchicercecarceregeregaedececeaacregecere 181 GCAGGGGAGCCTGCGCCTGTGGGATTCCCACGTATGCGGAGTGAGCCTGCTGCTCAGCCACCG Gaps Ashkenazi A, Botstein D, Desnoyers L, Eaton DL, Ferrara N; Filvaroff E, Fong S, Gao W, Gerber H, Gerritsen ME, Goddard A; Godowski PJ, Grimaldi JC, Gurney AL, Hillan KJ, Kljavin IJ; Mather JP, Pan J, Paoni NF, Roy MA, Stewart TA, Tumas D; Williams PM, Wood WI; 99.1%; Score 1090.6; DB 8; Length 1100; 99.6%; Pred. ä New PRO polypeptides and nucleic acid molecules, useful in diagnosing or treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, cancer, AIDS, Alzheimer's disease or Parkinson's disease.

Claim 2; Fig 91; 473pp; English.

The invention describes sixty one nucleic acids encoding PRO polypeptides (secreted and transmembrane). The PRO polypeptides and nucleic acids are useful in diagnosing or treating entercolitis, gastrointestinal culeration, skin diseases associated with abnormal keratinocyte differentiation, e.g. psoriasis or epithelial cancers such as squamous cell carcinoma. Alzheimer's disease, e.g. rheumatoid arthritis, asthma or multiple sclerosis, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, cancer, diabetic complications, or mutations in general. The polypeptides are also useful for wound repair and associated therapies concerned with reconstructions or the PRO polypeptides and nucleic acid molecules are also useful in gene therapy, and as molecular weight markers for protein clertrophoresis purposes. The anti-PRO antibodies may be used in diagnostic assays for PRO, or for the affinity purification of PRO from recombinant cell culture or natural sources. This sequence encodes a convenience of the con

```
The invention relates to an isolated secreted and transmembrane PRO polypeptide. The PRO polypeptides are useful for modulating biological activity of a cell, in diagnosing or treating abnormal bleeding involved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating abnormal bleeding involved in gynecological diseases, skin diseases and neurodegenerative diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Botstein D, Desnoyers L, Eaton DL, Pong S, Gao W, Gerber H, Gerritsen Grimaldi JC, Gurney AL, Hillan KJ, Pan J, Paoni NF, Roy MA, Stewart TA,

in gynaecological diseases e.g. to avoid or lessen the need for 'hysterectomy, for treating angiogenesis, tumour, coronary ischaemic condition, disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal (differentiation) (e.g. psoriasis), Parkinson's disease, Alrheimer's disease, amyorrophic lateral solerosis (ALS), neuropathies, disease, amyorrophic lateral solerosis (ALS), neuropathies, disease, cascade disorders, neurodegenerative disease, thrombosis, haemorrhage, endometrial bleeding, wound healing, tissue repair, asthma, rheumatoid arthritis, multiple sclerosis. Nucleic acid encoding PRO polypeptides are useful in molecular biology including uses as hybridisation probes and in the generating transgenic animals or knockout animals. The PRO contibodies are useful for immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for sample fluids. Anti-PRO antibodies are useful in diagnostic assays for sample fluids. Anti-PRO antibodies are useful in diagnostic assays for sample fluids. Anti-PRO antibodies are useful in diagnostic assays for sample fluids. The present sequence represents colls, tissues or serum and contrasting transmembrane PRO polypeptide.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucled acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptides for linking a bloactive molecule to a call expressing a PRO polypeptides are useful for detecting other PRO polypeptides are useful for detecting other PRO polypeptides are useful for detecting other PRO polypeptides are useful for modulating the bological activity of a call expressing a PRO polypeptides are useful for modulating the bological activity of a call expressing a PRO polypeptides are also useful for detecting disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions, skin diseases associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal diseases, amyotrophic lateral sclerosis (ALS), menopating and maintenance of gastrointestinal sease related to uncontrolled cell growth, e.g. cancer. PRO polypeptides also serves as tumour specific antigens which may be exploited as therapeutic targets for anti-tumour drugs, and are also employed therapeutic targets for anti-tumour drugs, and are also employed therapeutic targets for anti-tumour drugs, and are also employed therapeutic targets for anti-tumour drugs, and are also employed therapeutically in vivo for lessening the effects of viral antithrombotic agent with reduced risk for hemorrhage as compared with cheparin, in treating other PRO-apporties can be also used in assays to determine if the have a role in naurodegenerative diseases or their reversal as an antithrombotic agent with reduced risk for hemorrhage as customerial bleeding angiogenesis, and may also have an effect on kidney to relate the full-length PRO-CDNA or to isolate the full-length pro-CDNA or to isolate other compared with the general propertied and gene mapping, in the generating transgenic and gene mapping, in the generating transgenic and gene ma Novel isolated native PRO polypeptide useful for treating Parkinson's disease, enterocolitis, Zollinger-Ellison syndrome gastrointestinal ulceration, Alzheimer's disease, amyotrophic lateral sclerosis, Usher used in gene therapy, particularly for replacing a defective gene. The propertive gene. The propertion and the sective gene. The propertion and the sective gene. The propertion and the sective gene. New secreted and transmembrane polypeptides useful for treating skin, neurodegenerative diseases, asthma, rheumatoid arthritis, psoriasis and multiple sclerosis.

Claim 2; SEQ ID NO 256; 471pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating

cc at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodics are useful for modulating the biological activity of a cell expressing a PRO polypeptide. The PRO polypeptides are also useful for treating disorders associated with the preservation and maintenance of gastronitestinal mucosa and the repair of acute and chronic mucosal lesions, skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis) Parkinson's disease, Alzheimer's diseases, amyotrophic lateral scherosis (ALS), neuropathies and additionally, disease related to uncontrolled cell growth, e.g. cancer. PRO polypeptides are selected to uncontrolled cell growth, e.g. cancer. PRO polypeptides are selected to uncontrolled cell growth, e.g. cancer. Cc diseases, amyotrophyle can be also used in assays to determine infection. The RRO polypeptides can be also used in sasays to determine infection. The RRO polypeptides can be also used in sasays to determine the papicy determine the read and their processes of their reversal, as an antithrombotic agent with reduced risk for haemorrhage as compared with captured and other and their polymuclacides are useful in modulating endomerrial bleeding angiogenesis, and may also have an effect on kidney to solate the full-length RRO cDNA or to isolate other cDNA; including uses as hybridisation probes for changement and screening of the process and gene mapping, in the generating transgenic annuals or the reparating RRO polypeptides, for generating transgenic annuals or therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for recombinantly experisely and procein and for chromosome and gene mapping, in the generating companies of the RRO polypeptide (adantses) or prevent the effect of the RRO polypeptide (adantses) or prevent the effect of the RRO polypeptide (ada
